

## CLAIMS

1                    1. A hand power tool, comprising a housing; at least one  
2 handle having at least one gripping part; at least one elastic, vibration-  
3 damping element; a mounting part mounted on said elastic element; a said  
4 gripping part being mounted on said housing through said elastic element  
5 and through said mounting element; and at least one movable safety  
6 element through which said gripping part is connected with said mounting  
7 part.

1                    2. A hand power tool as defined in claim 1, wherein said safety  
2 element is formed as a bendable part.

1                    3. A hand power tool as defined in claim 2, wherein said safety  
2 element is formed as a rope.

1 4. A hand power tool as defined in claim 1, wherein said safety  
2 element is formed as a rigid component which is connected through said  
3 elastic element with said gripping part and said mounting part.

1 5. A hand power tool as defined in claim 1, wherein said elastic  
2 element surrounds said safety element.

1 6. A hand power tool as defined in claim 4, wherein said safety  
2 element is arranged in said elastic element along a central axis.

1 7. A hand power tool as defined in claim 1, wherein said safety  
2 element in a mounted condition is loaded by pulling, and said elastic element  
3 in a mounted condition is loaded by pressure.

1  
2

8. A hand power tool as defined in claim 1, wherein said safety element is formed as a band which surrounds said elastic element.

1  
2  
3  
4

9. A hand power tool as defined in claim 1, wherein said safety element determines a maximum deviation of said elastic element from a base position in a direction selected from the group consisting of a tilting direction, a displacing direction, and both.
